# Tool Compare

ISBE Tool Compare for Consistent High-Value Tools

- Compare simulation and scan data from all common systems with a master model

- Fast error detection by comparing several models simultaneously

- Compare the whole object or focus on the relevant parts of the tool

- Visualize deviations through colour coding

- Identify functional relevant differences at an early stage

- Ensure consistent high quality of tools

- Quality control within production in just a few minutes

- Available for all leading tool grinding and measuring machines

ISBE Tool Compare is a software which ensures the manufacturing quality of tools even over several batches. More information about ISBE software solutions and services on isbe.de.
